

Amendments to the Claims:

This listing of claims will replace all prior versions and listings of claims in the application.

Listing of Claims:

Claims 1-21 (canceled)

Claim 22 (currently amended): A recombinant construct comprising a polynucleotide encoding an AT hook transcription factor polypeptide, wherein the polynucleotide hybridizes to the complement of a nucleic acid sequence comprising SEQ ID NO: 13 under stringent conditions;

wherein said stringent conditions comprise 6X SSC at 65°C and two wash steps of 10 to 30 minutes with about 0.2x SSC, 0.1% SDS at 65°C or greater stringency; and

wherein the AT hook transcription factor polypeptide ~~comprises a conserved domain that~~ is at least [[65%]] 60% identical in its amino acid sequence to ~~amino acids 106-201 of~~ SEQ ID NO: 14.

Claim 23 (canceled)

Claim 24 (previously presented): The recombinant construct of claim 22, wherein the stringent conditions comprise two wash steps of 0.1X SSC, 0.1% SDS at 65°C for 30 minutes.

Claim 25 (currently amended): The recombinant construct of claim 22, wherein the transcription factor polypeptide ~~comprises a conserved domain that~~ is at least [[63%]] 90% identical ~~in its amino acid sequence to amino acids 106-201 of~~ to SEQ ID NO: 14.

Claim 26 (currently amended): The recombinant construct of claim 22, wherein the ~~expression vector~~ recombinant construct is comprised within a host plant cell.

Claim 27 (currently amended): A transgenic plant comprising a recombinant polynucleotide encoding an AT-hook transcription factor polypeptide;

~~wherein the AT-hook transcription factor polypeptide comprises an AT-hook domain, and a second conserved domain that is at least 90% identical in its amino acid sequence to amino acids 106-201 of~~ SEQ ID NO: 14

wherein the recombinant polynucleotide hybridizes to the complement of a nucleic acid sequence comprising SEQ ID NO: 13 under stringent conditions;

wherein said stringent conditions comprise 6X SSC at 65°C and two wash steps of 10 to 30 minutes with about 0.2x SSC, 0.1% SDS at 65°C or greater stringency; and

wherein the AT hook transcription factor polypeptide is at least 60% identical in its amino acid sequence to SEQ ID NO: 14.

Claim 28 (previously presented): The transgenic plant of claim 27, wherein the transgenic plant overexpresses the AT-hook transcription factor polypeptide and has greater biomass than a control plant.

Claim 29 (currently amended): The transgenic plant of claim 27, wherein the transgenic plant overexpresses the AT-hook transcription factor polypeptide and has more tolerance to ~~water deficit~~ drought conditions than a control plant.

Claim 30 (currently amended): The transgenic plant of claim 27, wherein the transcription factor polypeptide ~~comprises a conserved domain that~~ is at least [[95%]] 90% identical in its amino acid sequence to ~~amino acids 106-201 of~~ SEQ ID NO: 14.

Claim 31 (previously presented): The transgenic plant of Claim 27, wherein expression of the AT-hook transcription factor polypeptide is regulated by a constitutive, inducible, or tissue-specific promoter.

Claim 32 (currently amended): A method for producing a transgenic plant having increased biomass as compared to a control plant, the method steps comprising:

(a) providing a recombinant construct comprising:

(i) ~~a nucleic acid that encodes an AT-hook transcription factor polypeptide having an AT-hook domain and a second conserved domain at least 90% identical in its amino acid sequence to amino acids 106-201 of SEQ ID NO: 14~~

a polynucleotide that hybridizes to the complement of a nucleic acid sequence comprising SEQ ID NO: 13 under stringent conditions;

wherein said stringent conditions comprise 6X SSC at 65°C and two wash steps of 10 to 30 minutes with about 0.2x SSC, 0.1% SDS at 65°C or greater stringency; and

wherein the polynucleotide encodes an AT-hook transcription factor polypeptide at least 60% identical in its amino acid sequence to SEQ ID NO: 14; and

(ii) one or more regulatory elements that control expression of the AT-hook transcription

factor polypeptide;

(b) introducing the recombinant construct into a plant cell; and

(c) growing the plant cell into the transgenic plant, wherein the transgenic plant overexpresses the AT-hook transcription factor polypeptide and has increased biomass as compared to the control plant.

Claim 33 (previously presented): The method of Claim 32, the method steps further comprising:

(d) selfing or crossing said transgenic plant with increased biomass with itself or another plant, respectively, to produce transgenic seed; and

(e) growing a progeny plant from the transgenic seed, thus producing a transgenic progeny plant having increased biomass as compared to the control plant.

Claims 34-35 (canceled)

Claim 36 (currently amended): The method of claim 32, wherein the transcription factor polypeptide ~~comprises a conserved domain that~~ is at least [[95%]] 90% identical in its amino acid sequence to ~~amino acids 106-201 of SEQ ID NO: 14.~~

Claim 37 (currently amended): A method for producing a transgenic plant having more tolerance to ~~water deficit~~ drought conditions than a control plant, the method steps comprising:

(a) providing a recombinant construct comprising:

(i) ~~a nucleic acid that encodes an AT-hook transcription factor polypeptide having an AT-hook domain and a second conserved domain at least 90% identical in its amino acid sequence to amino acids 106-201 of SEQ ID NO: 14~~

a polynucleotide that hybridizes to the complement of a nucleic acid sequence comprising SEQ ID NO: 13 under stringent conditions;

wherein said stringent conditions comprise 6X SSC at 65°C and two wash steps of 10 to 30 minutes with about 0.2x SSC, 0.1% SDS at 65°C or greater stringency; and

wherein the polynucleotide encodes an AT-hook transcription factor polypeptide at least 60% identical in its amino acid sequence to SEQ ID NO: 14; and

(ii) one or more regulatory elements that control expression of the AT-hook transcription factor polypeptide;

(b) introducing the ~~expression vector~~ recombinant construct into a plant cell; and

(c) growing the plant cell into the transgenic plant, wherein the transgenic plant overexpresses the

AT-hook transcription factor polypeptide and has more tolerance to ~~water-deficit~~ drought conditions as compared to the control plant.

Claim 38 (currently amended): The method of Claim 37, the method steps further comprising:

(d) selfing or crossing said transgenic plant with more tolerance to ~~water-deficit~~ drought conditions with itself or another plant, respectively, to produce transgenic seed; and

(e) growing a progeny plant from the transgenic seed, thus producing a transgenic progeny plant having more tolerance to ~~water-deficit~~ drought conditions as compared to the control plant.

Claims 39-40 (canceled)

Claim 41 (currently amended): The method of claim 37, wherein the transcription factor polypeptide ~~comprises a conserved domain that~~ is at least [[95%]] 90% identical in its amino acid sequence to ~~amino acids 106-201 of~~ SEQ ID NO: 14.

Claim 42 (previously presented): A transgenic seed comprising the recombinant construct of claim 22.

Claim 43 (previously presented): A recombinant construct comprising a polynucleotide encoding an AT hook transcription factor polypeptide, wherein the polynucleotide comprises SEQ ID NO: 13.

Claim 44 (previously presented): The recombinant construct of claim 43, wherein the recombinant construct is comprised within a host plant cell.
